PROFESSIONAL SUMMARY

Graduate web developer with a completed, intensive software engineering qualification and hands-on experience in HTML, CSS, JavaScript, React, and Git, built through project-based training and an internship developing enterprise web components. Comfortable working in Agile, collaborative teams with continuous integration and code review. A fast learner eager to build impactful, real-world e-commerce software and grow into full Shopify development, combining strong front-end fundamentals with a proactive, growth-oriented mindset.

SKILLS

- Front-End: HTML, CSS, JavaScript, React.js
- Version Control & Collaboration: Git, GitHub, code review, pair programming, Agile collaboration
- Programming: Python, SQL, Java
- Tools & Platforms: VS Code, CI/CD pipelines (GitHub Actions)
- Concepts: OOP, TDD, Data Structures, Algorithms, Software Architecture
- Additional: Computer literacy, numeracy

WORK EXPERIENCE

Momentum Group — Intern | Feb 2026 – May 2026

- Enhanced and maintained internal web pages and components on an enterprise platform using PeopleSoft Application Designer to improve user experience.
- Collaborated across software development and data analytics teams to align project goals and improve communication.
- Automated recurring data preparation and reporting tasks to streamline workflow and reduce manual effort.

WeThinkCode — Technical Mentor (Volunteer) | Sep 2025 – Jan 2026

- Provided guidance on software development best practices and coding standards.
- Improved instructional materials supporting curriculum objectives for various programming languages.
- Facilitated peer-to-peer learning sessions to enhance collaborative problem-solving skills.
- Encouraged critical thinking by posing challenging questions during group discussions.
- Assisted students in troubleshooting technical issues during projects and exercises.

EDUCATION

WeThinkCode — Software Engineering Program | Sep 2024 – Dec 2025

- Completed an intensive, project-based software engineering program focusing on advanced problem-solving, data structures, and algorithmic logic.
- Collaborated in a high-intensity, Agile-driven environment utilizing pair programming, continuous integration, and team-based software delivery.
- Competent in Software Architecture, Test-Driven Development (TDD), Relational Databases, and Object-Oriented Programming (OOP) fundamentals.

CodeSpace — Front-End Fundamentals | Jun 2023 – Dec 2023

- Completed front-end fundamentals (HTML, CSS, JavaScript, React.js).
- Used Git/GitHub to manage curriculum projects.

PROJECTS

Cape Town Notification Dashboard |

- Built an ETL pipeline in Python to process service request data.
- Integrated with a Supabase/Postgres backend for structured storage.
- Developed a JavaScript frontend to visualize KPIs, complaints, and notifications.
- Hosted on GitHub Pages.
